Art Unit: 1711

1. The allowance has been withdrawn in order to reject the claims over the Takeda reference.

2. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The word "type" in line 8 of claim 1 makes this claim indefinite. When appended to an otherwise definite expression, "type" extends the scope of the expression to render it indefinite. (Ex parte Copenhaver, 109 USPQ 118).

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1, 2 and 5 are rejected under 35 U.S.C. 102(a) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Takeda.

Takeda discloses a aqueous, dry laminate adhesive (paragraph 9 of translation) comprising a water-borne polyurethane that softens below 40 degrees and has a melt viscosity at 50 degrees of 60,000 Pa.s, a polyisocyanate crosslinker, an association polymer thickener and water-dispersible black colors (example of paragraph 35). The

Art Unit: 1711

softening temperature of the cured film was 170 degrees C. In paragraph 13, he discloses that the water-borne polyurethane has an equivalent weight of 1000-20,000 and that it has at least two active hydrogens per mole. When a reference teaches a product that appears to be the same as a product set forth in a product-by-process claim (the water-borne polyurethane), the burden is shifted to the applicant. See *In re Marosi*, 218 USPQ 289, and MPEP 2113. In this case the reference is silent about the process.
